# Brilliant performance at an incredible value.

Nautilus LED surgical lights offer brilliant illumination and performance with a maximum intensity of 160,000 lux. These lights bring stunning clarity to any procedure and are equipped to handle the demands of any operating room.

## VERTICALLY SEGMENTED REFLECTOR DESIGN

With vertically segmented reflectors, each light beam is split into overlapping rays that are reflected down toward the surgical field. The result is a crisp, homogenous spot with reduced shadows. Due to the upward-facing LEDs, the light is also protected from potential heat damage.

## LIGHTWEIGHT MANEUVERABILITY

- Constructed of durable, lightweight polymer
- Positioning is simple and secure
- 360° rotation on all axes
- 20° upward and 90° downward travel
- Ideal for urology, hip and OB-GYN procedures.

Independently suspended LEDs are positioned below dedicated VSRD reflectors.

## FLEXIBLE CONFIGURATIONS

Customizable with one, two or three lightheads and optional flat-screen display, the Nautilus LED delivers high versatility and value. Compatible with Skytron Ergon booms and available on a portable stand, the Nautilus LED can be customized to accommodate minor procedures or complex surgeries.

## High Performance and Value

### DIFFERENTIATING FEATURES

- Vertically segmented reflector design for shadow reduction
- Upward-facing LEDs are suspended in cradles that keep the LEDs performing at peak capacity
- 25" diameter lighthead
- Maximum intensity up to 160,000 lux
- Lightweight polymer housing for exceptional durability
- Extended arms available
- 4278K color temperature
- Continuously variable intensity
